

Guide 10

Your data and backup

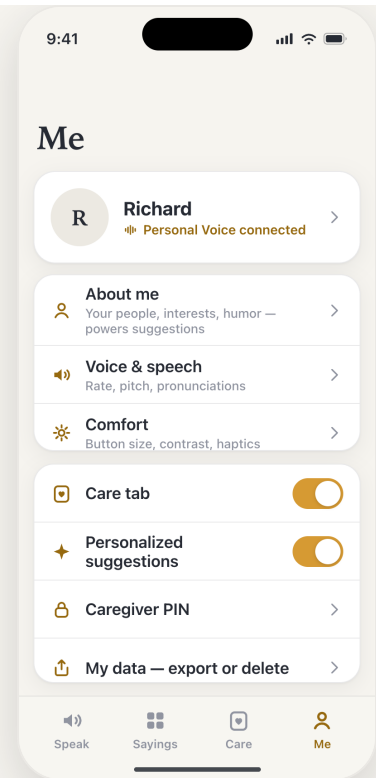

Keep your words safe, restore them anywhere, and stay in control.

Everything you build in Rejoin is yours. It lives on your device, it can be backed up safely, and you can lock it, export it, or delete it at any time.

For patients and caregivers.

1. It lives on your device

Your words, phrases, routines, and care log are stored on the device and work fully offline. An account keeps them in sync if you sign in on more than one device.

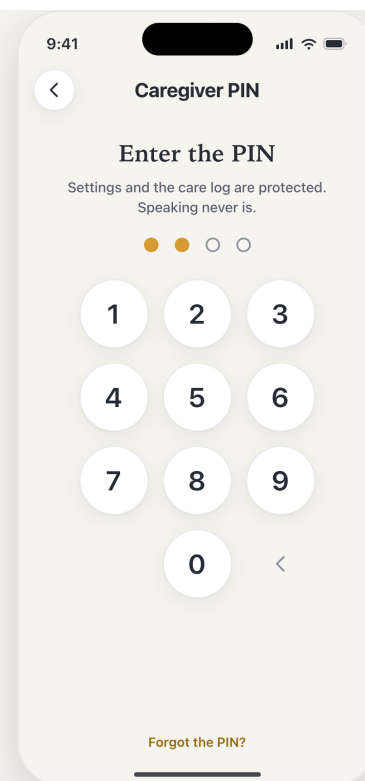

The Me tab.

2. Back it up safely

Rejoin can keep an encrypted backup so nothing is lost if a device is replaced. The backup is encrypted with a key kept in your own iCloud Keychain, which means only you can restore it, not even we can read it.

3. Lock it with a PIN

A caregiver PIN keeps settings and personal information protected, so only you or a trusted helper can change them, while speaking stays available to everyone.

Caregiver PIN.

4. Export or delete

From Me, then My data, you can export a copy of your information or delete it entirely. It is your data, and you stay in control of it.
